## Variety Overview

SHERIFF CL PLUS <sup>Ⓢ</sup> is the highest yielding APW Clearfield® Plus wheat available in the South-Eastern Zone. SHERIFF CL PLUS <sup>Ⓢ</sup> offers exceptional yield stability as consistently demonstrated within NVT MET yield results. SHERIFF CL PLUS <sup>Ⓢ</sup> is a mid-slow maturing wheat and is ideally suited to a late April to early May sowing. It can be sown approximately five days earlier than SCEPTER <sup>Ⓢ</sup>. SHERIFF CL PLUS <sup>Ⓢ</sup> offers a useful disease resistance package, including good yellow leaf spot resistance. Proactive management for stripe, stem and leaf rust is also recommended. SHERIFF CL PLUS <sup>Ⓢ</sup>'s maturity coupled with the Clearfield® Plus trait provides an ideal variety for early sowing as it supports a flexible, post emergent weed control option with the use of label rates of Intervix®. SHERIFF CL PLUS <sup>Ⓢ</sup> has a moderate plant height and has good physical grain characteristics, including a good grain size and hectolitre weight.

**SHERIFF CL PLUS <sup>Ⓢ</sup> is available for planting from local Seedclub members and resellers.**

## CLEARFIELD<sup>®</sup> PLUS PRODUCTION SYSTEM

SHERIFF CL PLUS<sup>®</sup> possesses two genes which confer tolerance to label rates of the Intervix<sup>®</sup> herbicide. Intervix<sup>®</sup> is a member of the Group B – imidazolinone chemical family. Intervix<sup>®</sup> is a post-emergent herbicide providing control of many major grass and broadleaf weeds present in broadacre cropping systems. These weeds include brome grass, barley grass, wild oats, indian hedge mustard, muskweed, oats, wheat and barley (non-Clearfield<sup>®</sup>), wild radish, wild turnip and suppression of annual ryegrass.

For full product, plant back and application details please refer to the Intervix<sup>®</sup> product label available
